vCenter Lifecycle Manager Change Download Source Instructions

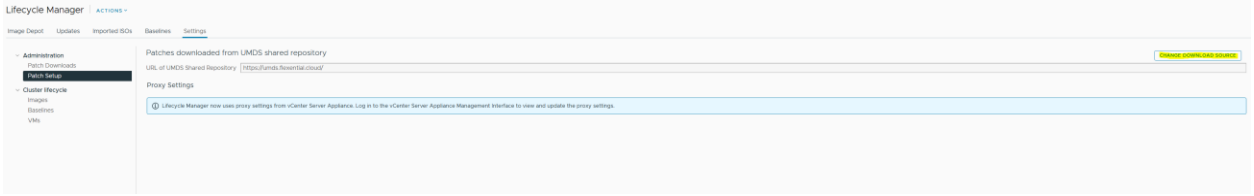

Prework: Import Sectigo CA certificate bundle into vCenter Trusted Root Store

1. Download sectigo-ca-bundle.cer file.
2. In vCenter navigate to Administration – Certificates – Certificate Management
3. In Trusted Root tab select Add Trusted Root Certificate. Select browse and select the sectigo-ca-bundle.cer file that was previously downloaded.

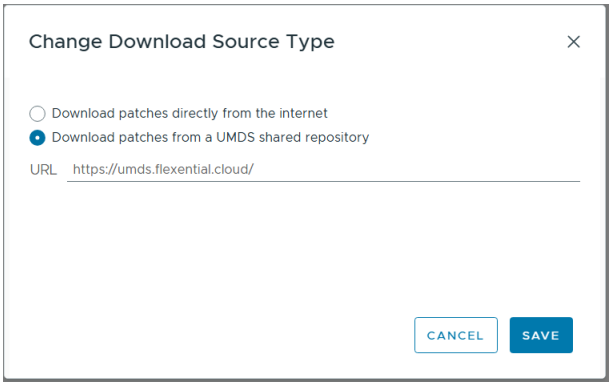

Change Download Source of Lifecycle Manager

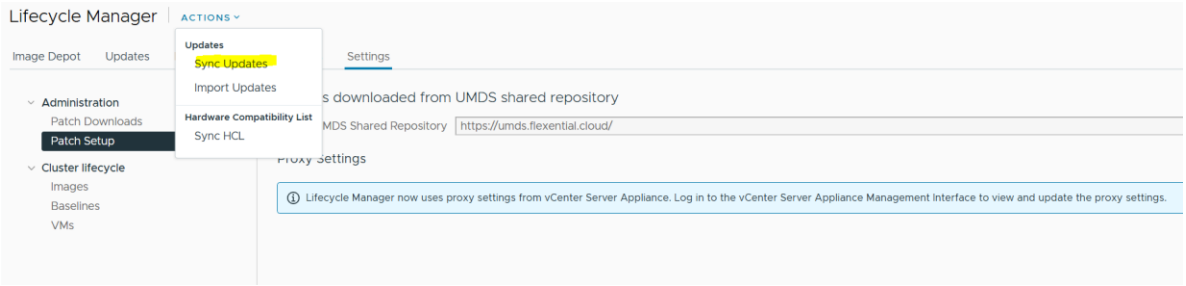

1. In vCenter navigate to Lifecycle Manager – Settings tab – Administration – Patch Setup
2. Select the Change Download Source button on the right side of the vCenter UI

3. In the Change Download Source dialog box, select 'Download patches from a UMDS shared repository'. Enter https://umds.flexential.cloud in the url field. Click Save.

4. In the Lifecycle Manager Actions drop down, select Sync Updates.

5. Once the sync updates vcenter task has completed update packages and metadata should now be visible in the Image Depot tab of Lifecycle Manager.
